### **DETAILED ACTION**

#### ***Claim Rejections - 35 USC § 103***

4. Claims 1, 2, 8, 9, 12, and 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gonzalez (US Patent 5,111,994 from the IDS).

Gonzalez '994 discloses a shower head having: a housing 10 and a water inlet 40 as recited; a jet disk 28 for exit of jets, wherein the jet disk has a front face having apertures 5 from which the jets exit from the shower head; an aerator comprising a hub 16 and 30 located centrally in the jet disk with an axial passage 23 through which air intake takes place from the front face of the jet disk via 17, Wherein the hub has at least one radial air conduit 25 in a vicinity of an end of the hub that is located upstream of the jet disk and faces an interior of the housing, and wherein the hub has on an exterior of the hub a guide surface for guiding the discrete aerated jets toward the apertures from which the jets exit the jet disk. Gonzalez '994 does not disclose essentially axially arrayed guides for guiding the jets, however, such a modification would have been a design choice, because since the exterior surface of the hub provides a guide surface for the aerated jets, the addition of axially arrayed guides will cause the hub surface to

still function the same in guiding the aerated jets. It would also have been a design choice to make the guides inclined as recited in claim 12.
